

# Illusion® Prestige Dissolvable Frac Plug

## IMPROVES OPERATIONAL EFFICIENCIES BEFORE AND AFTER THE PLUG DISSOLVES

### OVERVIEW

The Illusion® Prestige frac plug is another evolutionary step in Halliburton dissolvable frac plug technology that features a robust, optimized design to improve operational efficiency and reliability. This enhanced platform shifts to a bottom-set plug design, which removes the need for non-dissolving steel shear pins and enables a more efficient method of attaching to the setting tool adapter kit. Anti-preset features minimize risk while running in hole, which allows operators to pump the plugs in place faster, with more reliability. The mandrel-less design of the Illusion Prestige frac plug increases the flowback ID and helps ensure components have the maximum surface area exposed to well fluids post-frac. These attributes help accelerate the dissolution process after completing the fracturing treatment, leading to faster and easier wellbore cleanouts.

### FEATURES AND BENEFITS

- » Accelerated dissolution times
- » Increased pumpdown rates
- » 10,000-psi pressure rating
- » Ball-in-place or ball-drop capabilities
- » Anti-preset feature
- » Bottom-set design
- » Engineered high-strength dissolvable alloy
- » Large ID
