

H5 Matter Analytics

Know more faster with results-driven analytics

PRODUCT OVERVIEW

**Accelerate
review**

**Evaluate the quality and
composition of productions**

**Detect privilege and
sensitive information**

What is Matter Analytics?

Matter Analytics is a Relativity-integrated solution to assist you in creating efficiencies and managing workflow.

UNCOVER DOCUMENT RELATIONSHIPS

- Streamline review by identifying email thread relationships using advanced algorithms to improve the efficacy of threading relationships when compared to traditional solutions.
- Group similar documents for faster review with flexible near-duplicate identification combined with Relativity's document compare tool to identify differences.
- Reduce volume by identifying exact content duplicates that may contain only formatting differences which traditionally cause hash differences during processing.

ADVANCED ANALYTICS FOR PRIVILEGE REVIEW

- Automatically identify law firms and legal concepts.
- Tag and tier potentially privileged data, create privilege reasons, and detect potential privilege waivers using customizable rules.
- Automatically exclude detected disclaimers and boilerplate language.
- Tackle lawyer name variations with advanced name normalization technology.
- Eliminate duplicate content, clearly identify where lawyers and third parties enter and exit conversations, and enable nuanced coding decisions with our email thread viewer.

PERSONAL DATA DETECTION

- Quickly analyze data sets for categories of personally identifiable information (PII) to assist in understanding the sensitive data characteristics.
- Identify document and form types that often contain PII, such as IRS forms and resumes.
- Prioritize identified documents in tiers based on the likelihood of PII, organized by PII data type.

METADATA MADE ACTIONABLE

- Streamline reviews by quickly identifying mass email communications.
- Focus case preparation research on narrower bands of communication, such as 1:1 emails.
- Simplify search activity and privilege log creation by normalizing names in a data population.
- Set aside or exclude signature images, embedded objects, and other heavily duplicative content.
- Remediate data populations with missing or incomplete metadata, such as inbound productions or scanned documents, by auto-detecting and populating email metadata fields.

H5 is now Lighthouse

H5 is now Lighthouse, which strengthens our ability to modernize the ediscovery and information governance space with a technology-first focus, meet accelerated demand for technologies and services that span the entire client data life cycle, and fully embrace the rapid shifts to cloud and hybrid environments.
