

Hybrid-Cloud Storage for Milestone XProtect - Slash Storage Cost and Complexity with Wasabi and Tiger Technology

Convert file-based format to object storage, taking advantage of the cost and capacity benefits of the cloud

Ever-increasing storage demands with camera proliferation, hi-resolution video, and prolonged retention policies are creating a storage burden for organizations in the video surveillance space. Conventional tape libraries and other on-site storage solutions are too expensive and complex to scale with the amount of video files generated.

More security organizations and businesses are beginning to adopt cloud storage as a way to reduce video storage complexity and costs. As they do so, one of the main obstacles they face is converting a file-based structure to cloud object storage. AWS's S3 API has quickly become the standard for accessing cloud services. Most Video Management Software (VMS) applications, servers, and storage devices lack a native S3 interface to cloud storage, leaving surveillance teams unable to access cloud storage services.

Tiger Technology's Bridge to the Cloud

The expansion of the surveillance industry now requires additional and more cost-effective storage options for the substantial amount of video being created. Footage may be stored in different locations depending on retention and compliance requirements. For instance, live camera data may be stored locally while also being replicated continuously to the cloud. Embracing this hybrid-cloud model for surveillance solves the problem of storing increasing amounts of video in the most cost-effective way. However, most VMS vendors lack public cloud support as a built-in feature, making it difficult for enterprises to take advantage of the cloud's cost and capacity benefits.

Tiger Technology's Storage Bridge solution, a native MIP Plug-in for Milestone XProtect, seamlessly extends your local storage to the cloud. Storage Bridge provides the fastest possible disaster recovery by replicating all critical video files to the cloud. Storage Bridge natively supports the S3 API, allowing for instant transfers of video files to and from Wasabi.

The demand for more cameras, longer retention periods and the higher resolution has dramatically increased storage requirements. The seamless integration of Storage Bridge with XProtect makes the local storage appear unlimited while saving up to 80% compared to on-premises hardware.

Save local space by moving older and rarely accessed files to the Cloud

Upon creation, video surveillance files are actively being accessed by XProtect, analytics and other applications. As time goes on, these files are accessed far less often, unless tagged as 'critical' due to an incident. Ultimately, 75 to 90 percent of all video files are rarely accessed, but still take up a significant amount of space. Why not

KEY FEATURES

- Fast and reliable cloud backup
- Seamless integration and operation
- Native S3 protocol support
- Durable storage for video archive and regulatory compliance

BENEFITS

- Slash storage cost and complexity
- Extend local storage to cloud
- Fastest possible disaster recovery
- Reduce risk and exposure due to data loss
- Work with object data using traditional applications

move them to the cloud? With Tiger Technology and Wasabi's seamless S3 integration, these older and less accessed video files can be seamlessly moved to the cloud for immediate access when required.

How it Works

Wasabi Hot Cloud Storage Delivers Breakthrough Economics and Performance

Wasabi is the hot cloud storage company delivering low-cost, fast and reliable cloud storage on-demand. Wasabi's solution is 80% less expensive and is faster than first-generation cloud vendors. Wasabi hot cloud storage is designed with eleven nines (99.999999999%) of object durability and immutability that guarantees stored objects cannot be deleted or modified by anyone. Not only is Wasabi 80% less expensive to store video recordings than traditional cloud providers, but there are also no fees for egress or API requests. Wasabi keeps all files "hot" so it can be accessed in milliseconds. All Milestone and Wasabi customers can treat their video files as hot, so they can shorten upload windows and quickly access their video files for faster retrieval times.

About Tiger Technology

Tiger Technology has been developing software and designing high-performance, secure, data management solutions for companies in Surveillance, Enterprise IT, Media and Entertainment, and SMB/SME markets since 2004. Customers are using Tiger solutions in over 120 countries. Tiger Technology enables organizations of any size and scale to intelligently manage their digital assets on-premises, public cloud, or in a hybrid model.

About Milestone Systems

Milestone Systems is a leading provider of open platform video management software; technology that helps the world see how to ensure safety, protect assets and increase business efficiency. Milestone enables an open platform community that drives collaboration and innovation in the development and use of network video technology, with reliable and scalable solutions that are proven in more than 150,000 sites worldwide. Founded in 1998, Milestone is a stand-alone company in the Canon Group.

ABOUT WASABI

Wasabi provides simple, predictable and affordable hot cloud storage for businesses all over the world. It enables organizations to store and instantly access an infinite amount of data at 1/5th the price of the competition with no complex tiers or unpredictable egress fees. Trusted by tens of thousands of customers worldwide, Wasabi has been recognized as one of technology's fastest-growing and most visionary companies. Created by Carbonite co-founders and cloud storage pioneers David Friend and Jeff Flowers, Wasabi has secured \$140 million in funding to date and is a privately held company based in Boston.
